

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method in a data processing system for indicating an end of a session, the method comprising:
receiving an identification and a duration of a session from a data structure containing a schedule;
and
responsive to receiving the identification and the duration of the session, creating an audio file on a storage medium, wherein the audio file has a length equal to ~~a length~~ the duration of the session, wherein the audio file includes a silent segment followed by an audio segment and wherein the audio segment provides an indication of the end of the session when encountered during playing of the audio file, wherein a plurality of audio files are created on the storage medium in which each audio file corresponds to a given user session for a particular user according to the schedule.
2. (Original) The method of claim 1, wherein the data structure is a file for a calendar program.
3. (Currently Amended) The method of claim 1, wherein the receiving step comprises:
receiving [[an]] the identification and the duration of the session from a scheduling program.
4. (Original) The method of claim 1, wherein the storage medium is one of a compact disc, a digital versatile disc, a flash memory, or an audio tape.
5. (Original) The method of claim 1, wherein the audio segment is music.
6. (Original) The method of claim 1, wherein the silent segment is 59 minutes long and the audio segment is 1 minute long for a 60 minute session.
- 7-11. (Cancelled)
12. (Currently Amended) A data processing system for indicating an end of a session, the data processing system comprising:

receiving means for receiving an identification and a duration of a session from a data structure containing a schedule; and

creating means, responsive to receiving the identification and the duration of the session, for creating an audio file on a storage medium, wherein the audio file has a length equal to ~~a length~~ the duration of the session, wherein the audio file includes a silent segment followed by an audio segment and wherein the audio segment provides an indication of the end of the session when encountered during playing of the audio file, wherein a plurality of audio files are created on the storage medium in which each audio file corresponds to a given user session for a particular user according to the schedule.

13. (Original) The data processing system of claim 12, wherein the data structure is a file for a calendar program.

14. (Currently Amended) The data processing system of claim 12, wherein the receiving means is a first receiving means which includes:

second receiving means for receiving ~~[[an]]~~ the identification and the duration of the session from a scheduling program.

15. (Original) The data processing system of claim 12, wherein the storage medium is one of a compact disc, a digital versatile disc, a flash memory, or an audio tape.

16. (Original) The data processing system of claim 12, wherein the audio segment is music.

17. (Currently Amended) A computer program product encoded in a computer readable medium and operable by a data processing system for indicating an end of a session, the computer program product comprising:

first instructions for receiving an identification and a duration of a session from a data structure containing a schedule; and

second instructions, responsive to receiving the identification and the duration of the session, for creating an audio file on a storage medium, wherein the audio file has a length equal to ~~a length~~ the duration of the session, wherein the audio file includes a silent segment followed by an audio segment and wherein the audio segment provides an indication of the end of the session when encountered during playing of the audio file, wherein a plurality of audio files are created on the storage medium in which each audio file corresponds to a given user session for a particular user according to the schedule.

18. (Original) The computer program product of claim 17, wherein the data structure is a file for a calendar program.

19. (Currently Amended) The computer program product of claim 17, wherein the first instructions includes:

sub-instructions for receiving ~~[[an]]~~ the identification and the duration of the session from a scheduling program.

20. (Original) The computer program product of claim 17, wherein the storage medium is one of a compact disc, a digital versatile disc, a flash memory, or an audio tape.

21. (Original) The computer program product of claim 17, wherein the audio segment is music.

22. (Currently Amended) A data processing system comprising:

a bus system;

a memory connected to the bus system, wherein the memory includes a set of instructions; and
a processing unit connected to the bus system, wherein the processing unit executes a set of instructions to receive an identification and a duration of a session from a data structure containing a schedule; and
create an audio file on a storage medium in response to receiving the identification and the duration of the session, wherein the audio file has a length equal to ~~a length~~ the duration of the session, wherein the audio file includes a silent segment followed by an audio segment, and wherein the audio segment provides an indication of the end of the session when encountered during playing of the audio file, wherein a plurality of audio files are created on the storage medium in which each audio file corresponds to a given user session for a particular user according to the schedule.
